

## Title 5 Student Survey Fall 2022

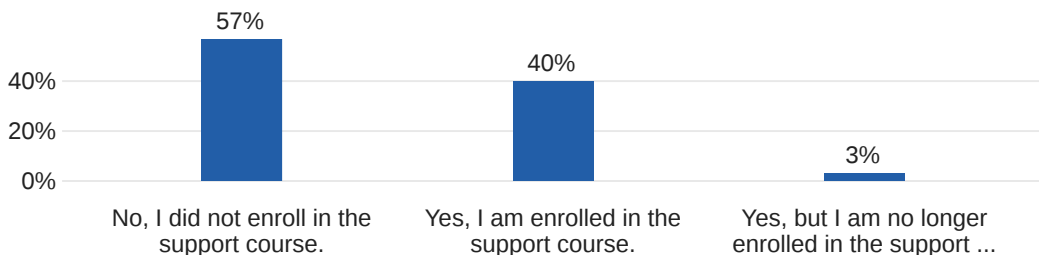

Please select one class to evaluate for this survey. If you are currently enrolled in more than one of the following courses, please complete separate surveys for each course enrolled.

234 Responses

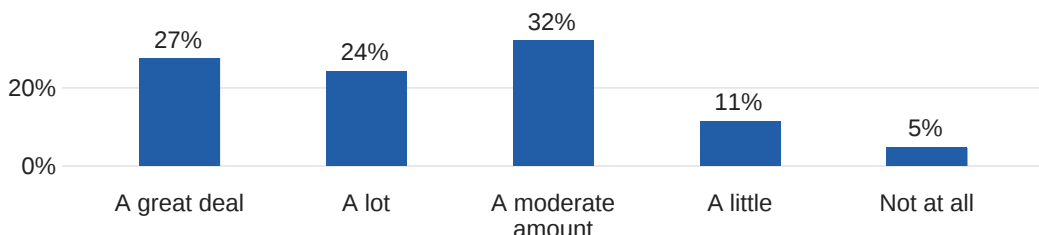

Did you enroll in support course for this class this semester?

160 Responses

Did the support course help to improve your overall performance in class?

62 Responses

## Tell us more about your experience in the support course.

Tell us more about your experience in the support course.

I had so much support from the instructor and felt comfortable enough to speak up and voice my opinion.

Great help fixing Grammar, developing ideas for essays and formatting a document

This class helped me highlight important aspects in passages and to evaluate my thoughts into writing

I found it difficult to maintain all the work that was assigned as it felt like just more homework instead of actually helping. Although there were times where the extra practice was helpful.

The support course actually made me understand the material of statistics a lot more clearly.

The support course is great. Its pass/fail but as long as you're passing math you're most likely to pass.

I am in puente and it helped me a lot with time management and being able to turn in my assignments on time or earlier than the due date.

It was hard to get help as they work and I work as well but Also because there's a lot of students so there's a long wait.

English is not my strong suite and with this class I was able to do very well and I learned so much.

Very friendly staff helped me correct grammar mistake, run-ons and use transition words for essays as well gave me ideas to add or how to begin my paragraphs.

If you mean math lab, it was very helpful. I was able to go there to get work done.

At first I thought the class was very simple and not too hard but over time the class made it so that simple responses wouldn't do making me and my classmates develop more in depth analytical responses for the given questions.

They were there to help me when I needed it

English 101/112 has greatly helped me to improve my writing and analysis skills. I am studying to be a paralegal and this skill is essential to my success.

I feel like it helped us to better understand what we were doing in class. Gave us more experience

The math center was pretty helpful some of the times

I feel like half of the topics in support had nothing to do with statistics It would have been nice to practice more of the chapters as in homework questions from the book.

The tutors were very helpful and understanding

Everything went fast for me for this fall semester.

I took English 112, which was support for English 101. However, the 112 did not support me for my 101. Most of the time, 112 assignments were irrelevant for the 101 class.

I liked how I got to have more practice in my support class.

the tutors were very helpful

Well it was where I didn't understand correctly how citing your work was to be done and my instructor really went over and beyond to show me the correct way only thing is she fronted me out in front of the entire class

I only understood some concepts because the support professor teaches it differently than my statistics professor in person.

I did not utilize the support course due to lack of time.

This course has helped me a lot with my writing, apart from that my experience was pretty good because I learned a lot about writing.

It helped in giving us the guidance we needed to have successful semester

they helped with my essay

Really, it support me to get a well grade in my course.

My English teacher told us in the class that he doesn't recommend going to the writing center for help when writing essays for him since they wouldn't be able to help us he stated.

It helped me better my writing and reading for my English 101 class.

## Tell us more about why you dropped the support course.

Tell us more about why you dropped the support course.

I realized I didn't need the support class

I didn't need it anymore.

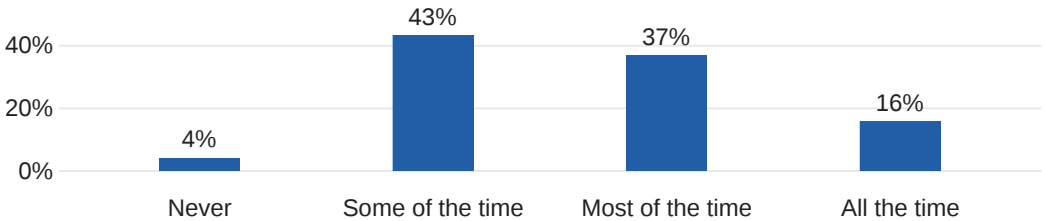

i failed

I need more algebra refresher class

## Thinking about the entire semester in this class, how often did you do any of the following?

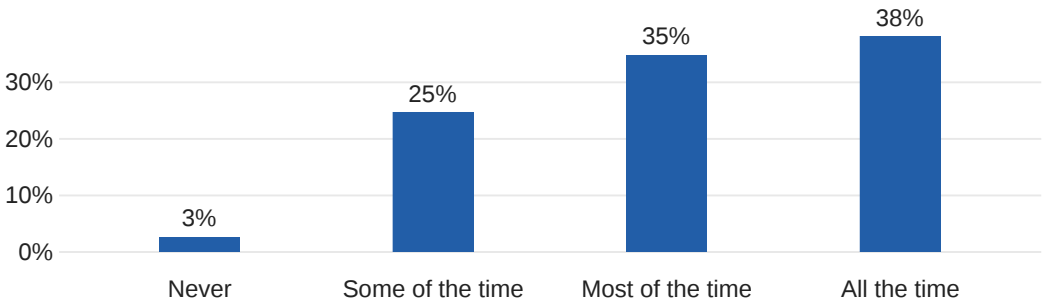

### Studied on a regular basis

198 Responses

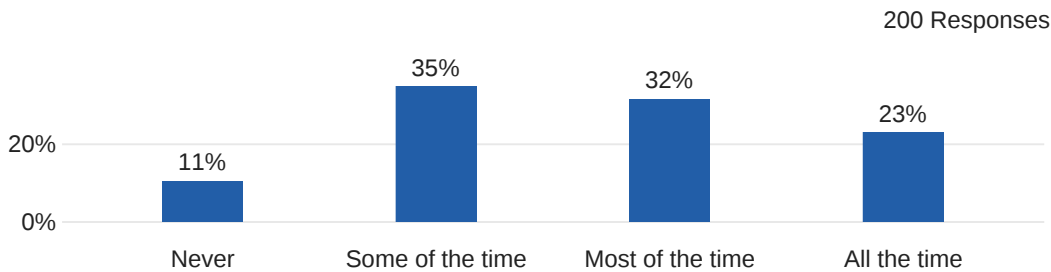

### Completed all the homework problems each week

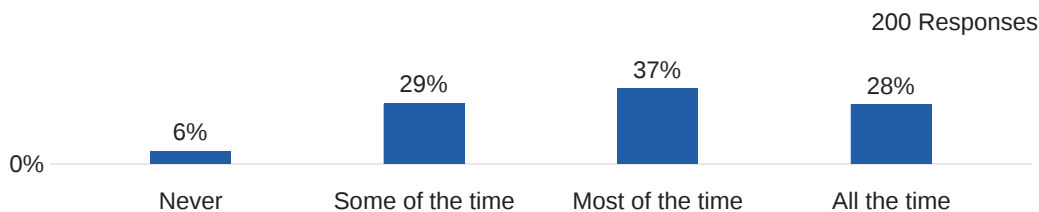

199 Responses

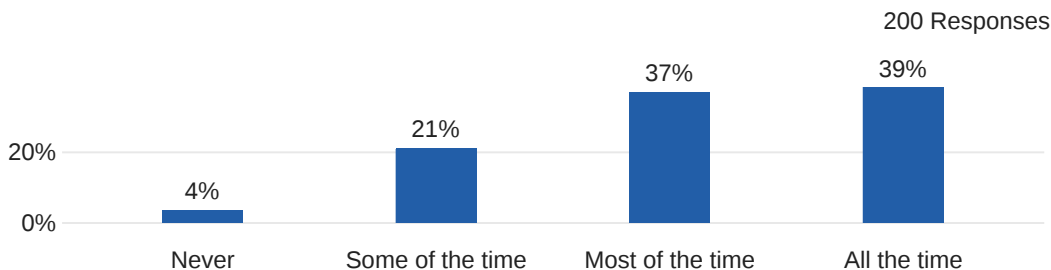

### Stayed up on the reading each week

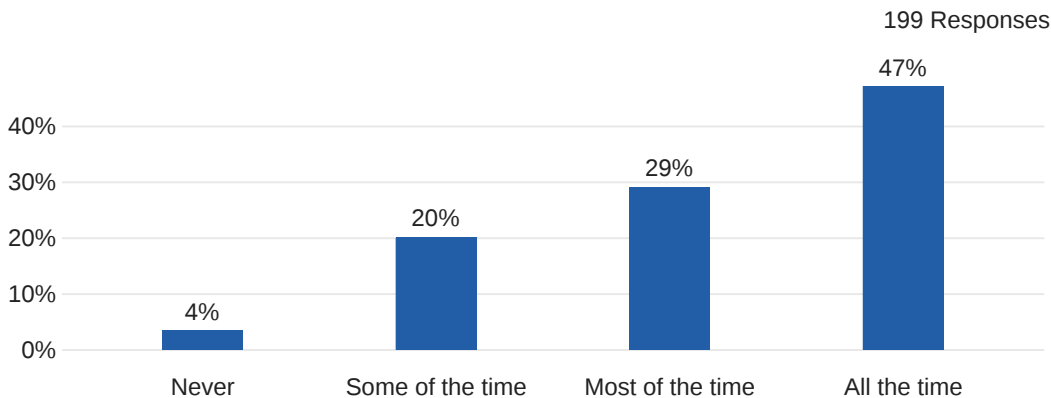

### Looked over class notes between classes to make sure I understood the material

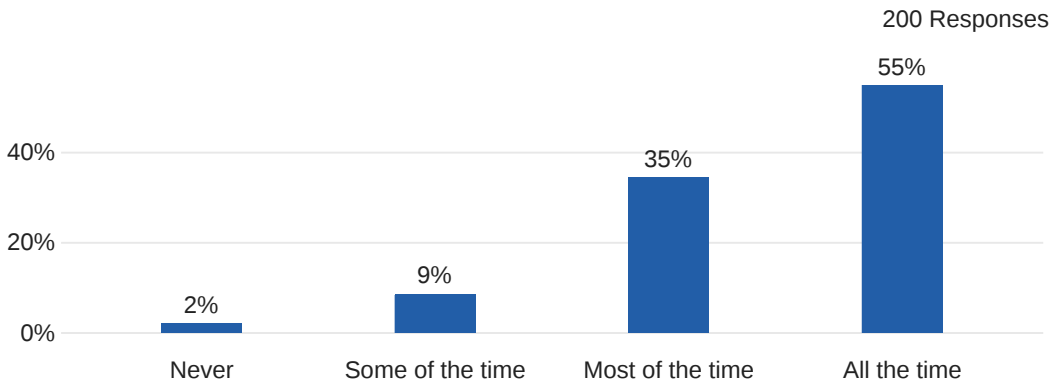

### Stayed organized

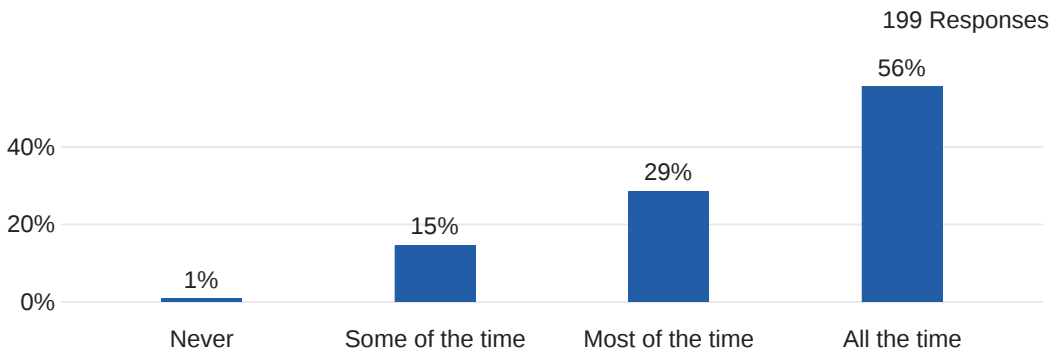

### Took good notes

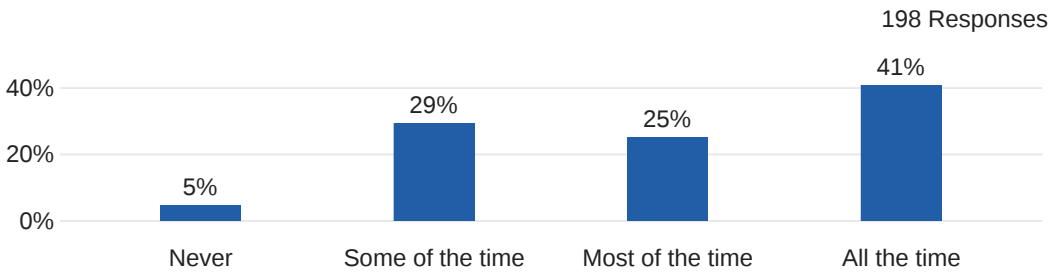

## Listened carefully in class

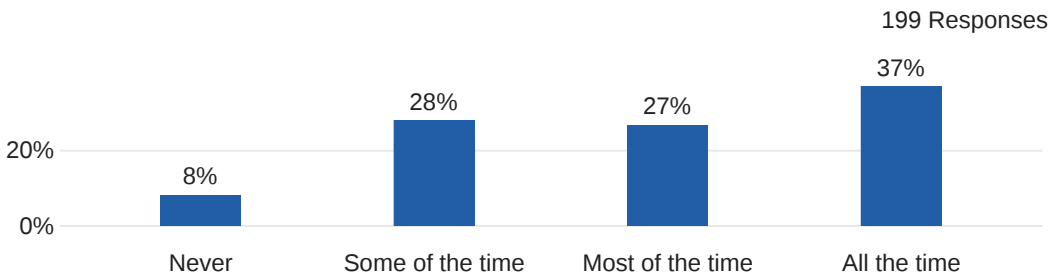

## Came to class each week

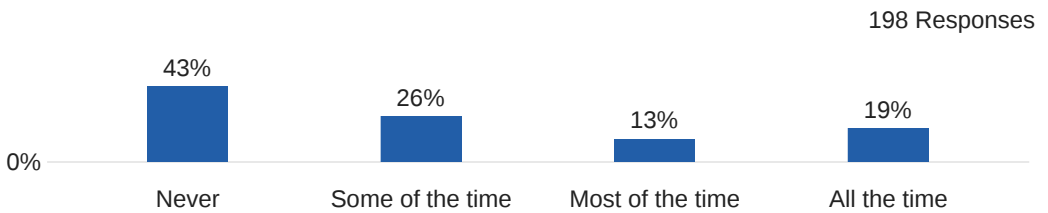

## Participated in class

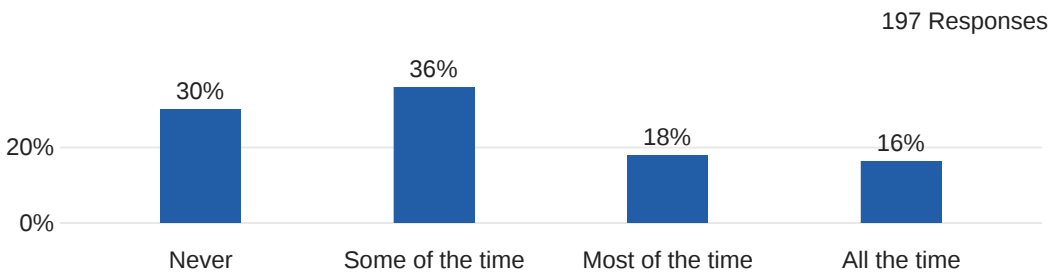

## Asking questions when I didn't understand the material or the instructor

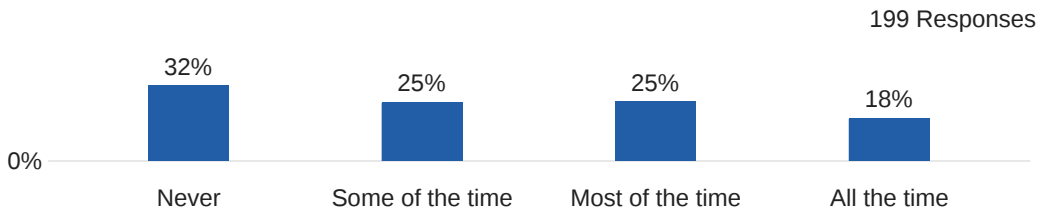

## Went to the professor's office hours to review assignments or tests or to ask questions

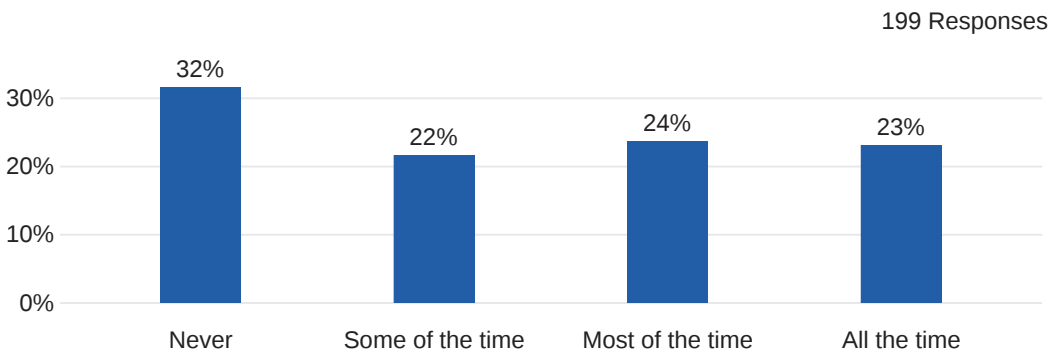

## Sought help from counselor or student services

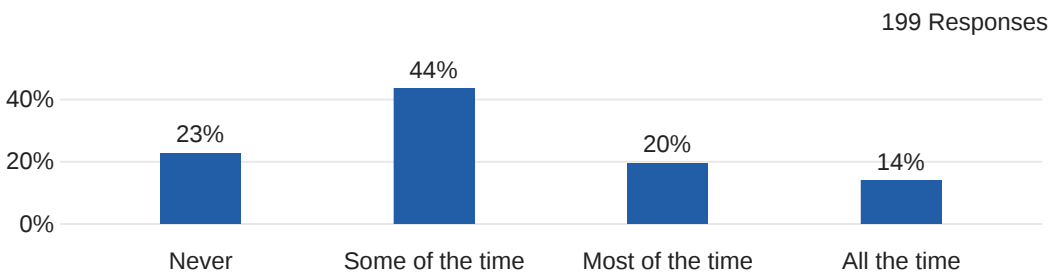

## Had someone review assignments before submitting them

## Sought tutoring assistance when needed

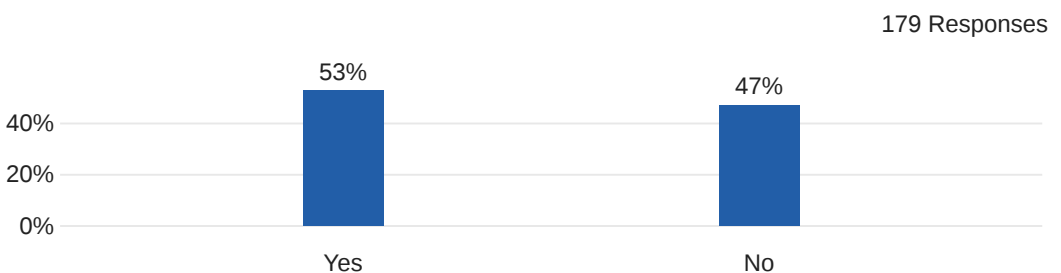

## Put off assignments to late minute

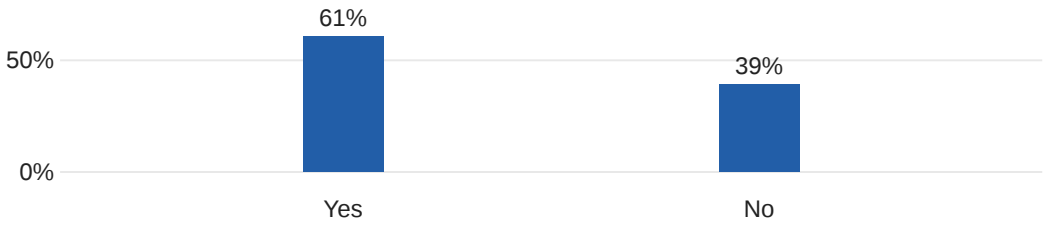

## While enrolled in this course, did you access any of the following resources?

### Instructor office hours

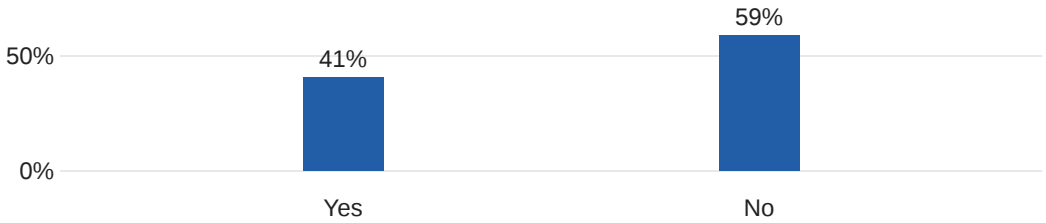

## In-class tutor office hours or study sessions

179 Responses

## Tutoring Center

186 Responses

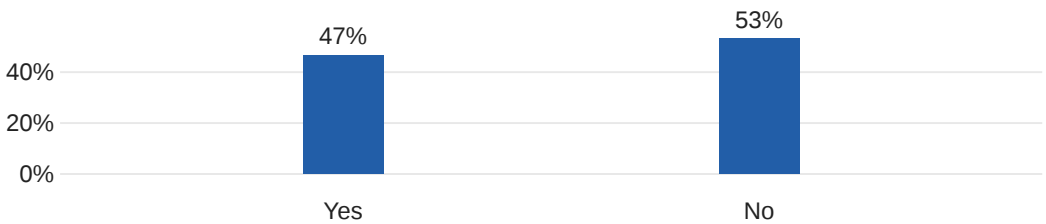

## Math Center

179 Responses

## Writing Center

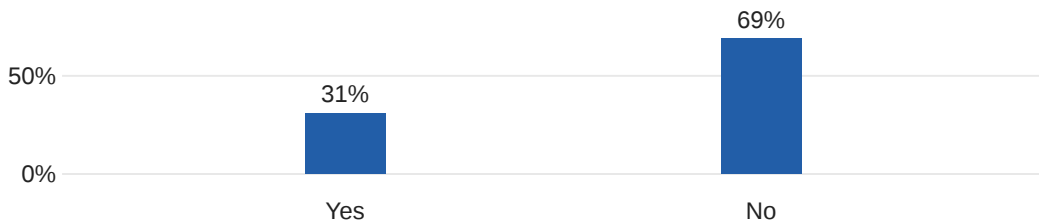

176 Responses

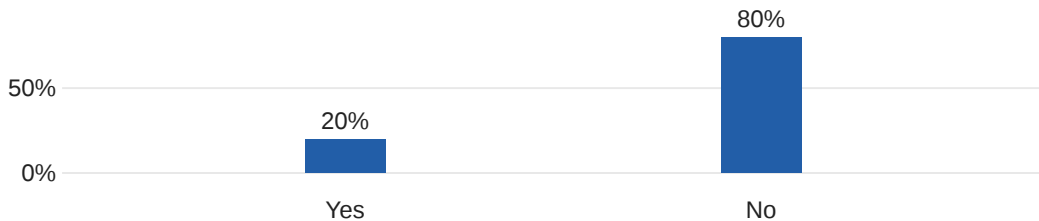

### Academic Resource Center (ARC)

Eops

peer mentor

STEM Center was an absolute blessing

Everything was accessible to us and throughout the semester we were reminded about all the useful help there is around campus

EOPS/ Rising Scholars

Studyathon

Language Lab

Studied at Library

I taken English 102

lots of help from Peer Mentor

## In this class, what are one or two specific challenges you faced?

In this class, what are one or two specific challenges you faced?

One challenge that impacted my whole semester was because of my professor. He didn't teach all material, he would assign a lot of work for us but he wouldn't grade it. He would get t frustrated when you ask for help. He was not clear with instruction or teaching.

To much essays

Leaving things last minute or sometimes trying to figure out the assignment on my own which took a lot of time instead of asking help

One thing that I faced was being able to keep up with the stuff we were learning because it was a hard-core class in a way.

I think paying attention is a little difficult for me in class, but my professor always explained things well and it really helped.

writing big papers and learning about the further implications of a work

doing my homework and going to night classes

Time management

The exams did not resemble the assigned homework

I had a hard time staying motivated to complete the work and fully grasp and understand the concepts

Reading the textbook

Keeping up with the reading and annotating the books/articles.

Lecture

The essay were hard especially if it's worth half of our grade

I'm not sure i faced any challenges at least not any that were very severe because my professor did a very good job at make sure we understood the assignment and would respond to emails fairly quickly if needed!

Something that was specifically a little challenging for me with this class was just learning so many different topics so quickly. Math isn't my strongest subject so sometimes I have a hard time being on a faster-paced schedule with it. However, all the resources offered with this class definitely helped!

Too much information

None

having to learn the material quick

Trying to keep up with each chapters and a bit more studying and understanding of the chapter

One specific challenge was trying to keep up with daily activities and trying to memorize problem-solving during our quizzes.

The biggest challenge was trying to catch up on my school work after being hospitalized and missing the 2nd and 3rd week of school. The second was remembering to do the homework every day.

How fast the information was given

Procrastination. Getting work done while having a job.

I have a tendency to not ask for help when I don't understand an assignment or the notes so that becomes a challenge.

Needing the notes

My instructor assignment a workload of work weekly and it is hard to keep up while having other classes that have homework as well.

English 101. The challenge I was facing is the writing essays. I would go to the writing center and help me and I'm like ""ok I feel like I got this"" but once I turn it in all this marks down what I get wrong and I'm like where do I get the help now?

In all honesty I did not face any challenges. Dr. Dimick made sure to be very explanatory and made clear advice and guidance.

I did face a lot of confusion because there is so many formulas for me to remember but that was the only struggle and having to put things aside for work.

In this class one of my challenges were some of the Chapters that I didn't understand but getting help at the math center each week helped me go through these Chapters.

I struggled with finding motivation to study and do the work, along with I was just challenged by the course material.

Other then tight deadlines I feel the class was great!

Not managing my time. Trying to understand the assignment instead of asking for help which took most of my time.

jus with some of the work my professor was able to explained everything so well I was just a little lost a few times

research paper

talking to people and taxes

Trying to stay up to date with my work and turn it in on time, and also try to understand the material.

One challenge I faced was making a more analytical essay response. I overcame it with the guides the professor made for us and allowed for us to gauge our responses into the more analytical side instead of simple basics responses

Having to remember a lot of the correct formulas

I didn't really face any challenges.

Keeping up with reading and assignments

I faced fast pace learning and adapting to new materiel each day was a challenge since I still was trying to comprehend the last materiel.

To much work

The material was not explained clearly and didn't make sense when went to do the book work.

Probably catching up on reading because it would be time consuming and I had 4 other classes.

I get writer's block and I also get anxiety. I am constantly battling.

Balancing school and work and getting in contact with class mates

It was hard to talk to anyone to get peers to review material

Amount of material, and many tests

Some challenges I faced was getting confused with what formulas to use, and also not knowing anyone in that class made it difficult for me to talk to someone when we had to compare and share our answers.

Understanding material initially and remembering the material

one of my challenges was time management

memorizing the material

keeping up with so much assignments.

- study for test each week

- remembering terms

The teacher not explain everything clearly, the tutor was not always available when I had an appointment. I have 504 plan for someone to take notes, I never received any note taker.

Being organized with my notes so i can later study and understand the material. Making time within my schedule to be able to go to my professors office hours

Math has always challenging for me so going to my instructor's office hours really helped me grasp the information. I am happy when a challenge came I was willing to get help.

My test.

Understanding the material about certain words for reading stratifies.

The assignment load and the length

The class was different from what I expected. I passed the course easily, but without learning. One challenge that I faced was having an inexperienced instructor.

questions being answered and quizzes

I would say time, because many lessons were rushed

Two of the most challenging things I faced in this class was that it was hard for me to work with a group or in teams I had a hard time writing essays and I ended up being dropped from the class I just didn't know what was going on.

This class was a lot harder than I expected. I wasn't able to access tutoring due to my work schedule as often as I would have liked.

Well it's stats so enough said.

I would understand to content but the test felt like they were designed for you to fail.

Two specific challenges were a lot of equations and topics to understand what they are and what they do and how do they relate to other topics.

Taking in class tests and at home tests.

One challenge I had was remembering some previous material from the start of the year leading up to the final.

Not one of us did not understand our material before leaving class for that day

Two challenges that I faced is to not procrastinate on assignments and to keep up with the required reading.

One obstacle was trying to remember all of the material. It covers an abundance at a time, making it somewhat challenging to keep track of everything.

No challenges

Understanding certain concepts. Remembering to do each homework assignment.

I am a major procrastinator

Completely understanding the material and making it to class.

The main challenge I had was writing the essays and putting them all together. But using the writing center really helped

Angular momentum and Circular motion

Staying on top of the work load.

I struggled with some chapters but always got help from the school.

There wasnt any challenges i just didnt try because i took the wrong classes but im ready for next semester no fail.

essays and books

Studying for classes midterms.

Essays

One specific challenge was when the teacher did not give enough examples, explanation or problems before actually giving the homework out. Another specific challenges not telling the class what was actually expected on midterms/quizzes and not knowing what to study.

Looking for other students to study with.

That my grandma got sick and wasn't able to give the class my 100% attention.

Studying before class

Preparing for tests

Memorizing for lab exam

The concepts would sometimes take a week or two before I completely knew what I was doing. Doing physics problems accelerated this process, so after doing around 6 problems for each concept, I would finally know what I'm supposed to do.

This class was a difficult class, and struggled to learn the material since the professor tried to rush a lot of things last minute.

The only real challengers I faced were balancing my work and school schedules and balancing my work load with my other classes

My main challenge I faced was getting back into the groove of school. Since I took a 4 year break to help my mom finally before this term it's been pretty hard getting back into school. This caused me to lack in my English class. I am positive I will do better and have better habits next semester

I have my classes completely online so I can stay home and take care of my son when he's not at daycare. One obstacle was the beginning of the year. I was in 3 classes, one being English 101, and I just had my baby a month prior to school starting. I couldn't tell what were assignments and what was reading and a lot of my time went into my baby and work but my teacher was very helpful. Another obstacle was trying to prioritize my time correctly and not overloading myself by asking for help. I have a very hard time asking for help even though I know I need it.

The professor did not know some material she was trying to teach.

I felt like I didn't really have any problems with the class.

-turning in homework on time

-liking the material we read

attendance and procrastination

Managing the work load as well as managing the reading as well

Heavy usage of time, schedules not lining up.

the final 20 page assignment needs more time

I struggled on studying for tests and quizzes. I also struggled grasping all the material in the class.

Keeping up with the daily activities

I had assignments due the night it was assigned when I had work almost right after class which didn't leave me much time at all to complete it before the deadline and considered late

My challenge was staying focus enough to finish assignments outside of class.

Math is my weakness

Test taking was hard and the take homes were tuff

This semester was really hectic, due to the matter that im currently facing probation in college everytime i wanted to study or do homework i negative thoughts would come to my mind and i would feel more stress.

Specify writing styles

I didn't have really any problem with the class.

Staying organized with my writing and turning things in on time.

finishing essays and getting homework on time

The professor's teaching style. In other words, the presentation of the course material.

The challenges I faced were writing, doing essays, reading, taking notes.

Having more time

One of the challenges I faced was trying to keep up with the essay assignments. They were given every other week and it was stressful at one point.

The constant essay work was a little overwhelming but the teachers' program made it simple and fun. I wouldn't normally write as much as I did for a class.

Not enough knowledge in algebra

One of the challenges I faced this semester was how quick we had to learn the material and how much there was required to learn. It was hard to keep up especially with being a full time students while also working full time.

nothing

deadlines

one challenge I faced in this class was figuring out how to read a certain amount of pages before class. Another would be having the correct format in my essay, however I would go over to the writing center.

The obstacles I face in this class were that I felt that I constantly had to catch up, especially with the reading, since I had to read a lot for many of my other courses

I think one of the challenges was reading a lot because I'm not a good reader nor can I read fast, but I managed to complete my assignments.

higher level reading and comprehension, extensive writing

One challenge was staying on task and finishing the homework on time.

I struggled with the citation portion of my writings and continuously did so.

Having to constantly be consistent or risk falling behind.

Having to modify my studying habits in order to better fit the class

Learning to stay focused and trying not to do an assignment at the last minute.

Talk with my classmates. I don't like to talk

The challenges I faced were being productive and doing assignment correctly because the directions were a bit confusing.

My biggest challenge was trying to find peer reviewed articles for my research paper. Another challenge was trying to work with people on a group presentation some of them wouldn't answer me.

Tutoring availability or professor's office hours often overlapped with my class and work schedule. It would've helped if there were tutors or office hours after 8pm.

staying on track

How to write an essay.

This class was my most challenging and demanding course this semester. I felt very overwhelmed with time consuming assignments.

Essays

Trying to talk to people

1) Taking in so much information at once

2) Remembering terms

writing essays, and expanding my vocabulary

Turning my homework in on time.

The lectures were too theoretical and weren't focused on doing enough examples from the material.

The most challenging things in class were staying on top of my work and getting motivation to go to class.

I face Anxiety Test Math, Also blind my mind.

One specific challenge I faced was having to sort of teach myself certain things since it was fully online or having to put off my questions while doing assignments so that I could get more out of obtaining assistance from the professor.

To try to improve my listening about the English language. Also, I'm improvising my speaking in English.

One of the biggest challenges I faced in this class was getting the help I needed because since he told us that we couldn't go to the writing center since it would be useless I felt discouraged to get any help with the work I was struggling with.

I wish words in the class such as vocab words were better explained.

### Studying

A challenge I faced was becoming better at writing essays and research papers.

1. Class was not well-organized test and assignment wise
2. Professor did not take the time to review material

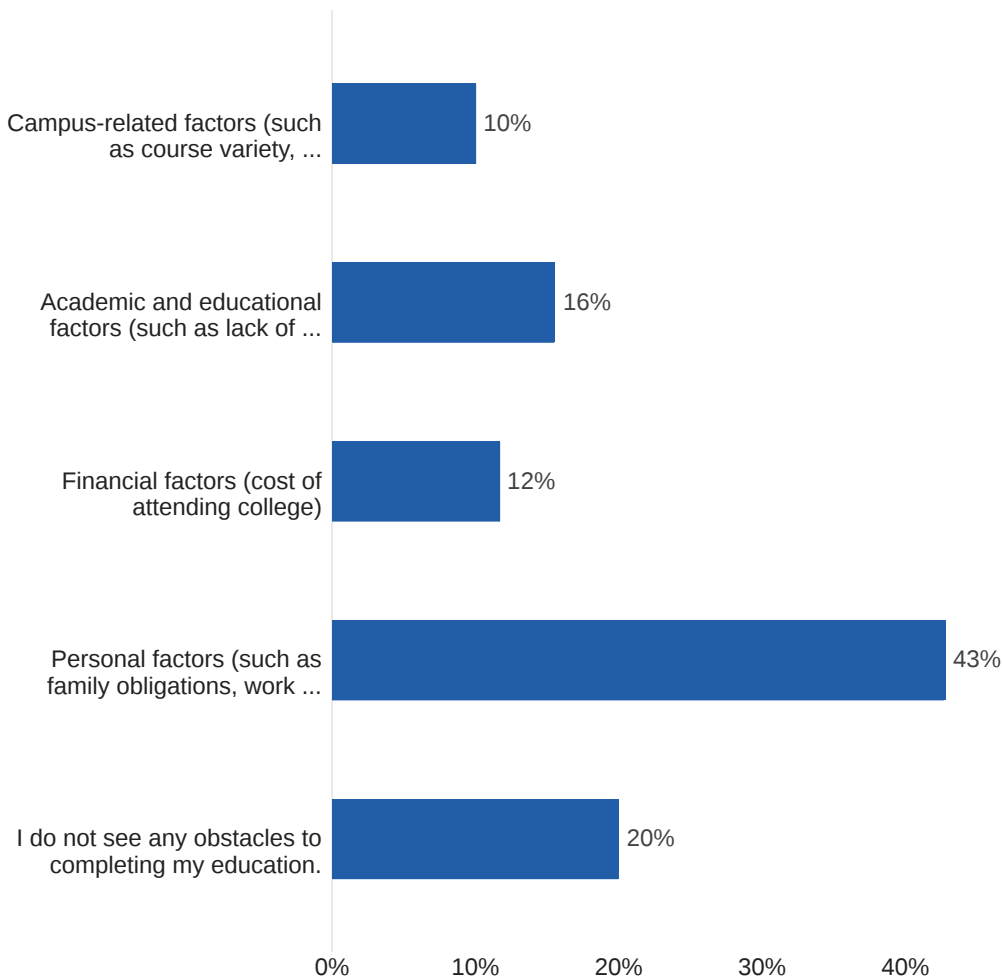

Too much work, a lot of reading and writing while dealing with my other classes.

The lecture exams were hard sometimes , and you had to be in class to understand

## Which one of the following presents the greatest obstacle to reaching your educational goals?

180 Responses

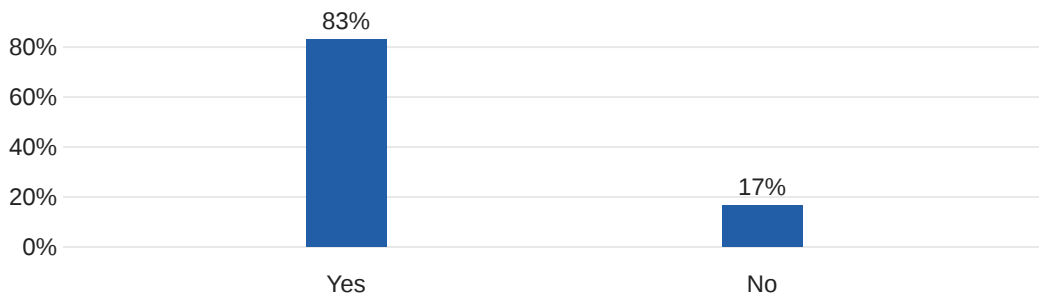

## Have you ever met with an AHC counselor (in person or online) since enrolling at AHC?

179 Responses

Prior to enrolling in the course, did you speak to a counselor and/or faculty member to make sure it was the right class for your educational goal?

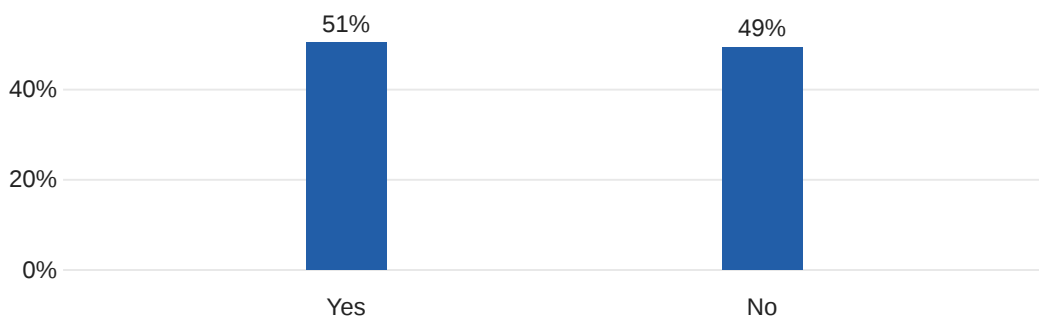

179 Responses

**This course was assigned an in-class tutor/peer facilitator. We would like to know about your experience with the in-class tutor/peer mentor.**

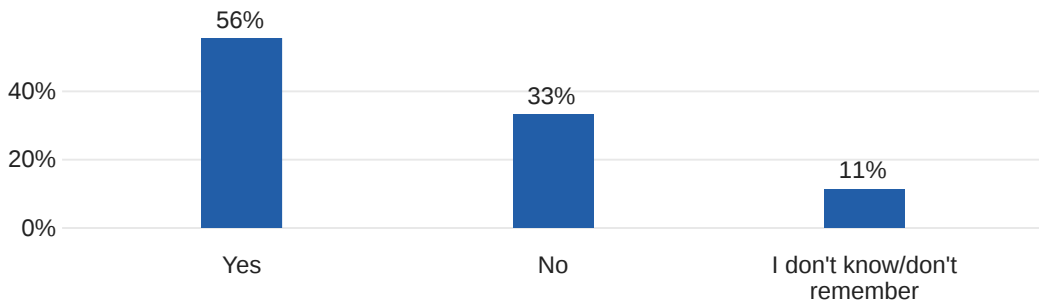

Prior to enrolling in this class, have you ever used tutoring services at AHC for any course (including math center, writing center, tutorial center, tutor in class, peer facilitator, NetTutor, Smarthinking)?

178 Responses

Did you meet with a tutor/peer facilitator assigned to your class anytime this semester?

## In what ways could your tutoring experience be improved/better?

In what ways could your tutoring experience be improved/better?

None

Juan was legitimately amazing. Answered every question, and showed tricks to make hard material much more understandable.

It's more so a matter of getting myself to take advantage of the help offered by the class tutor. They were very available and willing to help.

None

Going to class and/or sending emails to remind students of their availability for tutoring

I did not use the tutoring services

she tutored well in my opinion

Tutors are always helpful

More time/availability during math center hours.

Better communication with students

I don't know I never went to one

Perfect as is

Having a tutor that is more available.

I honestly couldn't complain, our in peer facilitator was phenomenal and I would consider her to be an amazing tutor and person to interact with.

Do anounth time

No

N/A

my tutor did good

Learning more material about the class

I honestly do not know what could have been better. I am thankful.

**We are always looking for ways to improve student success in this specific class. Feel free to leave a comment if you would like to share any feedback.**

We are always looking for ways to improve student success in this specific class. Feel free to leave a comment if you would like to share any feedback.

The counselors need to stop having people take this class with 6-8 other STEM units. This is a 4 unit class that feels like a 6 unit one. Speaking from experience, it is unacceptable to take this class in addition to a Chemistry, a Math and an Business class

Having a little bit more time to work on daily activities and fewer quizzes.

I really enjoyed the way the class was consistent in talking about help you can get

This class was a little challenging but with the help of my professor I was able to push through this course.

really push studying and meeting with the tutors/office hours/math center.

I wish people try to talk to me

Wish the professor could have explained things better.

This class is excellent great teacher with always great encouragement towards her students.

I think this class should be a basic math class, the material needs to be explained and needs to make sense when u read it in the book.

The material needs to be explained better, basic math class would be better for an entry level math requirement

I would recommend to give more support to new instructors

No

I love the course, and the professor was very understanding and helpful in grasping the material better.

My Peer tutor was great.

Anna was the best teacher i ever had made every topic super easy to underdatnd i even got some 100% scores on my tests

Ways to reach out to more shy/reclusive students. Like online messaging applications like discord or messenger. CircleIn was not used in our class, I think the other students couldnt be bothered to download the app or stuff like that. A consensus on what kind of messaging system to be used in class would be a good start

n/a

Having tutors with a late night availability for example 5-10pm would help out students like me to get more help. Also if we were able to submit our assignments for review it would help us to know where we need help and it would serve as practice for future tests.

Students don't want to talk to me.

I really enjoyed having Professor Okerblom as my Anatomy teacher. I am 100% confident that would have not passed the class if the teacher did not take the time and effort to help whenever he could and make the material understandable. I need to take Physiology next, but I am waiting to hopefully see that Prof. Oak will have the chance to teach it.

## Would you consider working as a peer mentor?
